Backend Engineer – Production AI/LLM Systems • Multi-LLM Pipelines • Cloud Infrastructure (AWS/Azure)

SKILLS

Languages	Python, JavaScript, TypeScript, SQL
AI & LLMs	Prompt Engineering, RAG (Retrieval-Augmented Generation), Multi-LLM Pipeline Orchestration (Gemini, Claude, AWS Bedrock), OpenAI API
Backend & APIs	FastAPI, Node.js (Express), REST APIs, Microservices
Databases	MongoDB, Azure Cosmos DB, PostgreSQL
Cloud & DevOps	AWS (S3), Azure (VMs, App Service, Blob Storage), GitHub Actions, Docker
Tools	SuperTokens (Auth), Amazon SES, Supabase, UptimeRobot

EXPERIENCE

BoardCerts — EdTech, Nursing Board Exam Preparation	Remote
<i>Backend Engineer (Promoted from Intern)</i>	<i>Jan 2025 – Present (1+ year)</i>
- Designed and delivered backend systems supporting automated content generation for exam content, meaningfully streamlining production and reducing manual review effort. - Partnered with product stakeholders to design and deliver core learning and assessment features, improving performance and experience for a growing base of daily active users. - Built and operated reliable, scalable production infrastructure with automated deployment pipelines, sustaining strong uptime and supporting consistent platform growth. - Implemented secure authentication and transactional communication workflows, improving the reliability of critical user notifications and reports.	
PanduAI — Python, FastAPI, Celery, MongoDB, Docker, Azure	Remote
<i>Backend Developer Intern</i>	<i>Jun 2024 – Oct 2024</i>
- Built high-performance RESTful APIs using FastAPI to ensure secure data exchange, implementing SuperTokens for auth and designing MongoDB schemas that supported complex queries with sub-100ms response times. - Implemented an asynchronous video generation pipeline using Celery, boosting system throughput by 300% (handling 10 concurrent requests per server) and preventing request timeouts. - Standardized deployment pipelines using Docker and GitHub Actions on Azure VMs, reducing manual release time and ensuring consistent environments.	
Dispatch For You — Next.js, Python, AWS, Agile	Remote
<i>Software Developer Intern</i>	<i>Jun 2023 – Apr 2024</i>
- Engineered server-side pagination logic to manage large datasets, resulting in a 50% reduction in server load and significantly enhancing user experience by minimizing page load latency. - Optimized storage infrastructure by migrating to AWS S3 and implementing image processing via Sharp, achieving consistent file size reductions of 90% while maintaining visual quality. - Led the strategic migration of authentication from Firebase to AWS Cognito (Amplify), strengthening data protection protocols for 100+ registered users.	

PROJECTS

Scalable E-Commerce <i>Node.js, Docker, NGINX, GitHub Actions</i>
- Constructed a microservices ecosystem with 6 independent Node.js services, utilizing NGINX as an API Gateway to balance load across containers effectively. - Configured CI/CD pipelines for automated testing and deployment, enabling zero-downtime updates and rapid iteration.
Database Backup Utility <i>Python, Typer, PostgreSQL, MongoDB</i>
Developed a CLI tool for encrypted backups with compression, ensuring 100% data integrity during recovery operations.

EDUCATION

KG Reddy College of Engineering and Technology	Hyderabad, India
<i>Bachelor of Technology - Computer Science</i>	
<i>Courses: Operating Systems, Design, and Analysis of Algorithms, Computer Network, Database Management Systems, Data Structure</i>
